

AutoFORM LaserNet to be demonstrated at TROPOS Customer Conference Tankersley Manor Sheffield 28th October 2009

EFS Technology's software, AutoFORM Output & Document Managements software has been selected to provide TROPOS users with a greater choice of solutions to convert their TROPOS ERP output into quality, transaction, quality and internal business documents and to manage their distribution to email, fax, print and archive.

Marc Jenkins, AutoFORM Technical Account Manager, will be showing how AutoFORM can dramatically reduce the amount of time that IT managers are currently spending on creating, modifying and managing document and print processes. These will be shown, using case study experiences at Firth Rixson and Hamworthy Combustion, two extensive TROPOS ERP and AutoFORM users.

AutoFORM LaserNet Facilities Include:

- **OUTPUT MANAGEMENT:** Eliminates the need for complex output programming: uses a simple 'drag and-drop' environment to enable rapid document creation and modification.
- **PRINT & E-DISTRIBUTION:** Converts output to fax, email, print, XML and HTML formats for accelerated, automated document distribution.
- **DOCUMENT ARCHIVE & WORKFLOW:** As documents are delivered, AutoFORM creates a document image with an archive index ready for online storage and viewing via AutoFORM PDM Workflow or web-browser.
